

(a) towards left (b) towards right
(c) upward (d) zero

-
- The diagram shows a spherical capacitor consisting of two concentric spheres. The inner sphere has a radius r and the outer sphere has a radius $3r$. The capacitor is connected to a battery and a switch K . The outer sphere is grounded.

- (a) $-\frac{q}{3}$ (b) $\frac{q}{3}$
(c) $3q$ (d) $-3q$
- (a) $\phi_1 = 0$ (b) $0 < \phi_1 < \phi$
(c) $\phi_1 = \phi$ (d) $\phi_1 > \phi$

(a) towards left (b) towards right
(c) upward (d) zero

-
- The diagram shows a spherical capacitor consisting of two concentric spheres. The inner sphere has a radius r and the outer sphere has a radius $3r$. The capacitor is connected to a battery and a switch K . The outer sphere is grounded, and the inner sphere is connected to the positive terminal of the battery.

- (a) $-\frac{q}{3}$ (b) $\frac{q}{3}$
(c) $3q$ (d) $-3q$
- (a) $\phi_1 = 0$ (b) $0 < \phi_1 < \phi$
(c) $\phi_1 = \phi$ (d) $\phi_1 > \phi$
